#### The Spark Cash Index

# Release version: August 2010

## About Spark ATM Systems

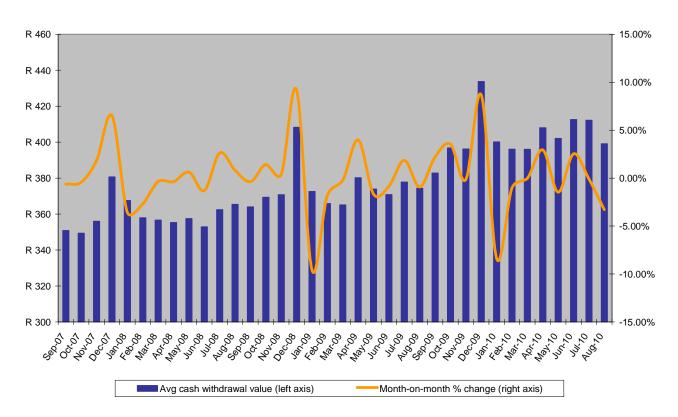

Spark ATM Systems is South Africa's leading independent ATM provider, deploying convenience Automated Teller Machines ('ATMs') in retail, convenience and hospitality locations across South Africa.

## Introduction to the Spark Cash Index

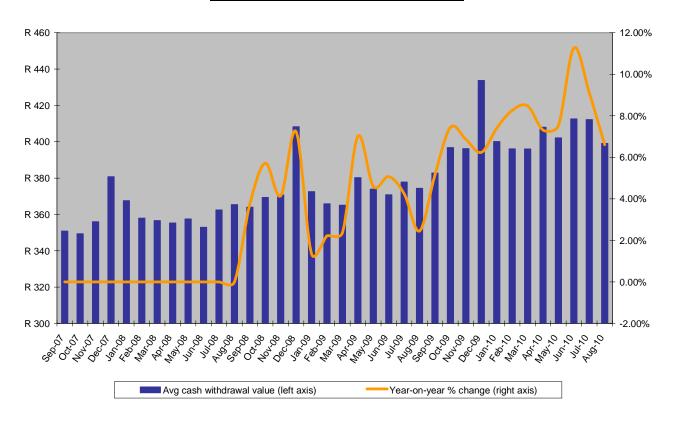

The amount of cash withdrawn at ATMs is a real-time indicator of cash availability and consumer spending in the economy. From our records we have noticed that over time the average amount of cash withdrawn at our network of ATMs corresponds with general economic conditions in the country. We have also seen that consumers vary the amount of cash they withdraw based on prevailing economic conditions, particularly variations in the prime interest rate.

# Commentary

The Spark Cash Index shows that average cash withdrawals for the month of August 2010 rose by 6.61% to R399 per withdrawal when compared to August of 2009 which showed an average withdrawal of R374.

During the Soccer World Cup, South Africa saw record average cash withdrawal increases but now, as anticipated, the Spark Cash Index is showing that consumers are holding back slightly after overspending during this period. August 2010 shows the largest decrease ever recorded on the Spark Cash Index outside of the annual post-Christmas decrease. The index recorded a decrease in average cash withdrawals of -3.29% from R412 to R399 from July 2010 to August 2010.

Many experts are anticipating a drop in interest rates later this week when the Monetary Policy Committee meets which will further affect cash demand across the country. The Spark Cash Index shows a direct link between cash demand and interest rate fluctuations - when the interest rate drops average cash withdrawals increase and vice versa.

## **Explanatory Notes**

The value for the Spark Cash Index value is obtained using the following formula: Cash dispensed for the month divided by the number of cash withdrawals for the month across a selection of Spark ATM's network of ATMs. The sample size is hundreds of thousands of transactions in both urban and rural areas across all nine provinces of South Africa, therefore representing a very good cross section of South African consumers.

The data presented is raw data and has not been adjusted for seasonality or for the effects of inflation.
