

HOW ARE WE DOING?

WITHDRAWALS | Cash withdrawal values across SA revealed an expected sharp drop from April to May this year, according to the latest Spark cash index. Withdrawals were, however, marginally up on February and March, according to independent ATM provider Spark ATM Systems. The average cash withdrawal for last month was R406, lower than April's average value of R423. "Historically, there is always a decrease in withdrawal values from April to May, with people returning to work with emptier-than-normal pockets after their holiday spending. This drop is consistent with previous years, but more pronounced this year," said Spark ATM Systems MD Marc Sternberg. He said that last month's withdrawal average of R406 was 8,55% up on May 2009's average of R374. I-Net Bridge
